## Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/15/03 has been entered.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-2, 4-5, 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over 5,061,073 ('073) in view of 4,587,622 ('622).
- ('073) discloses the device for position indication and detection of guidance errors having scale including position measuring graduation arranged in position measurement direction such as the scanning arrangement for graduation carrier 1, col. 2, lines 41-46 and col. 3, lines 23-25; a first guidance error measuring device is arranged perpendicularly with respect to the position measurement graduation, such as scanning fields A2 and reference mark scanning fields ARI and ARII; and second guidance error measuring graduation, such as surrounding field graduation 3 extends along each side of the measuring graduation 2 and runs perpendicular to

Application/Control Number: 09/661,663

Art Unit: 2863

the grid lines of the measuring graduation see col. 2, lines 49-55; position indication scanning unit movable with respect scale, such as the graduation carrier 1 carries a measuring graduation 2, see col. 2, lines 44-46.

('073) teaches as disclosed the scanning fields for measuring graduation, however does not teach guidance error scanning unit scanning error measuring graduation for generating error measurement signals. ('622) discloses guidance dependent positional errors of a measurement machine by moving the measurement probe of the machine along position standard which extends over substantially the entire measurement range and outputs signals of the signals of the coordinate measurement devices, see col. 2, lines 35-48 and col. 3, lines 15-25. It would have been obvious to one of the ordinary skill in the art at the time of invention to utilize the teaching of ('622) for generating signals such position measurement and guidance error measurement into the measuring graduation marking device of (073) for the higher operating reliability.

Regarding claim 2, ('073) discloses graduation carrier having graduation period of 8microns.

Regarding claims 4-5, ('622) discloses position measuring graduation and guidance error measuring graduation arranged on the common support element such as measuring devices are mounted to the part which is displaceable along the involved guide, see col. 3, lines 15-22.

Application/Control Number: 09/661,663

Art Unit: 2863

Regarding to claims 7-9, to recited various properties of the position indication and guidance error scanning unit, they are known to the person skilled in the art for scanning device as can seen in either prior arts.

## Allowable Subject Matter

Claims 3, 6, 12, 15, and 18 are objected to as being dependent upon a rejected 4. base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The cited prior art does not teach first and second guidance error measuring graduation having a graduation period identical to the position measuring graduation and extended over tan entire measurement distance (claim 3); and position scanning unit and first guidance error scanning unit are identical (claim 6); and guidance error scanning unit's arrangement (claim 12).

- The indicated allowability of claims 1-2, 4-5, 7-9 is withdrawn in view of the newly 5. discovered reference(s) to 5,061,073 and 4,587,622. Rejection based on the newly cited reference(s) is as above.
- 6. Claims 10, 11, 13-14,16 and 17 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kamini S Shah whose telephone number is 571-272-2279. The examiner can normally be reached on IFP.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Barlow can be reached on 571-272-2269. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
